Who is HCA?

**172 Hospitals in the U.S.
and 6 in the U.K.**

**119 Ambulatory Surgery
Centers**

51 Freestanding ERs

**HCA hospitals care for 27M+
patients annually**

- Admissions – 1.8 million
- Deliveries – 219,000
- ER visits – 8.4 million
- Physician Clinic Visits – 8 million
- Surgeries – 1.4 million

240,000 employees

- 80,000 nurses
- 47,000 allied health professionals
- 37,000 affiliated physicians
- 3,100 employed physicians & 1,000 practitioners

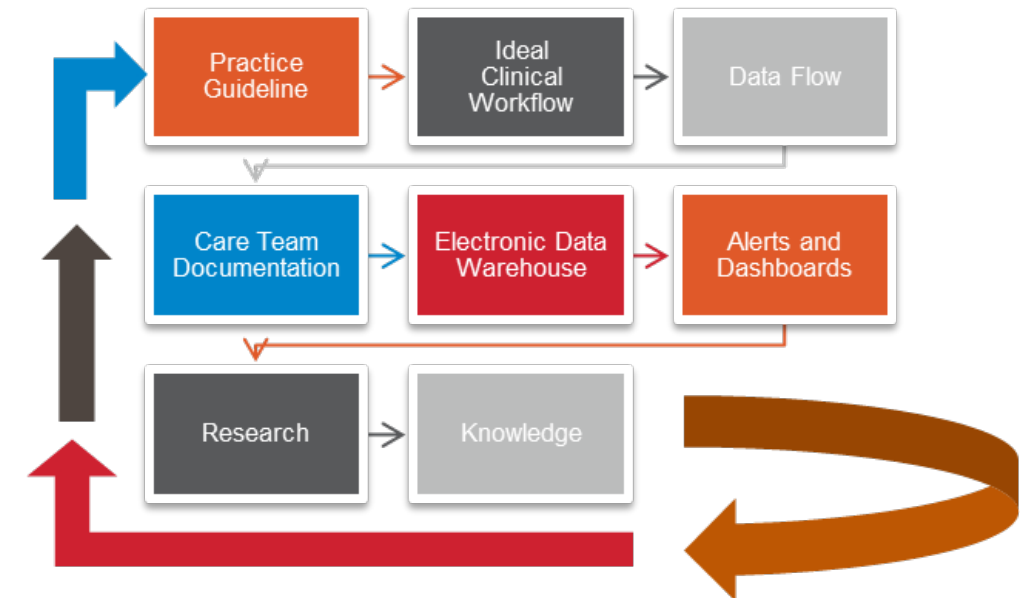

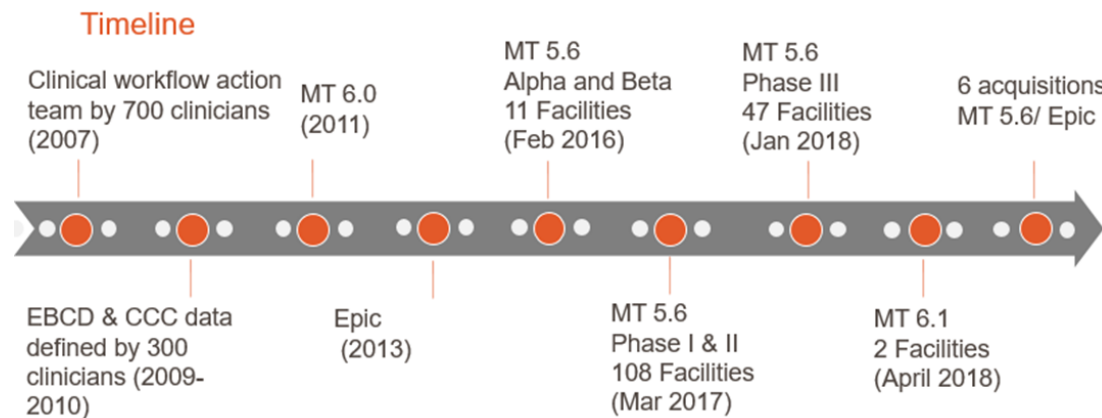

Topical Outline:

- Vision and History of EBCD
- Standards of Care, EBCD Design Guiding Principles, Governance of Data Assets
- Performance Visibility and Performance Management

The Vision

Create a patient-centric record:

- To guide and inform the provision of safe, effective and efficient care
- To support interdisciplinary care
- To produce data to evaluate care of individual and populations of patients

Formatting Nursing Data in the EHR: Nursing Terminologies and Beyond

A standard terminology for electronic health record (EHR) systems that supports capturing discrete patient care data for documenting the "essence of care" and measuring the relationship of clinical care to patient outcomes.

The CCC provides:

- Organizing framework for content development.
- Codes for data elements that enable data extraction and analysis.
- Mapping to SNOMED and LOINC.

Source:<https://careclassification.org>

Clinical Care Classification (CCC)

Evidence Based Clinical Documentation (EBCD)

The Business Case:

- Reduce RN time spent on documentation
- Respond to major RN dissatisfaction with documentation burden
- Return RN time to caregiving, improving patient outcomes and RN retention
- *Provide visibility of nursing standards of care with feedback loops for ensuring safe, effective, and high quality care*

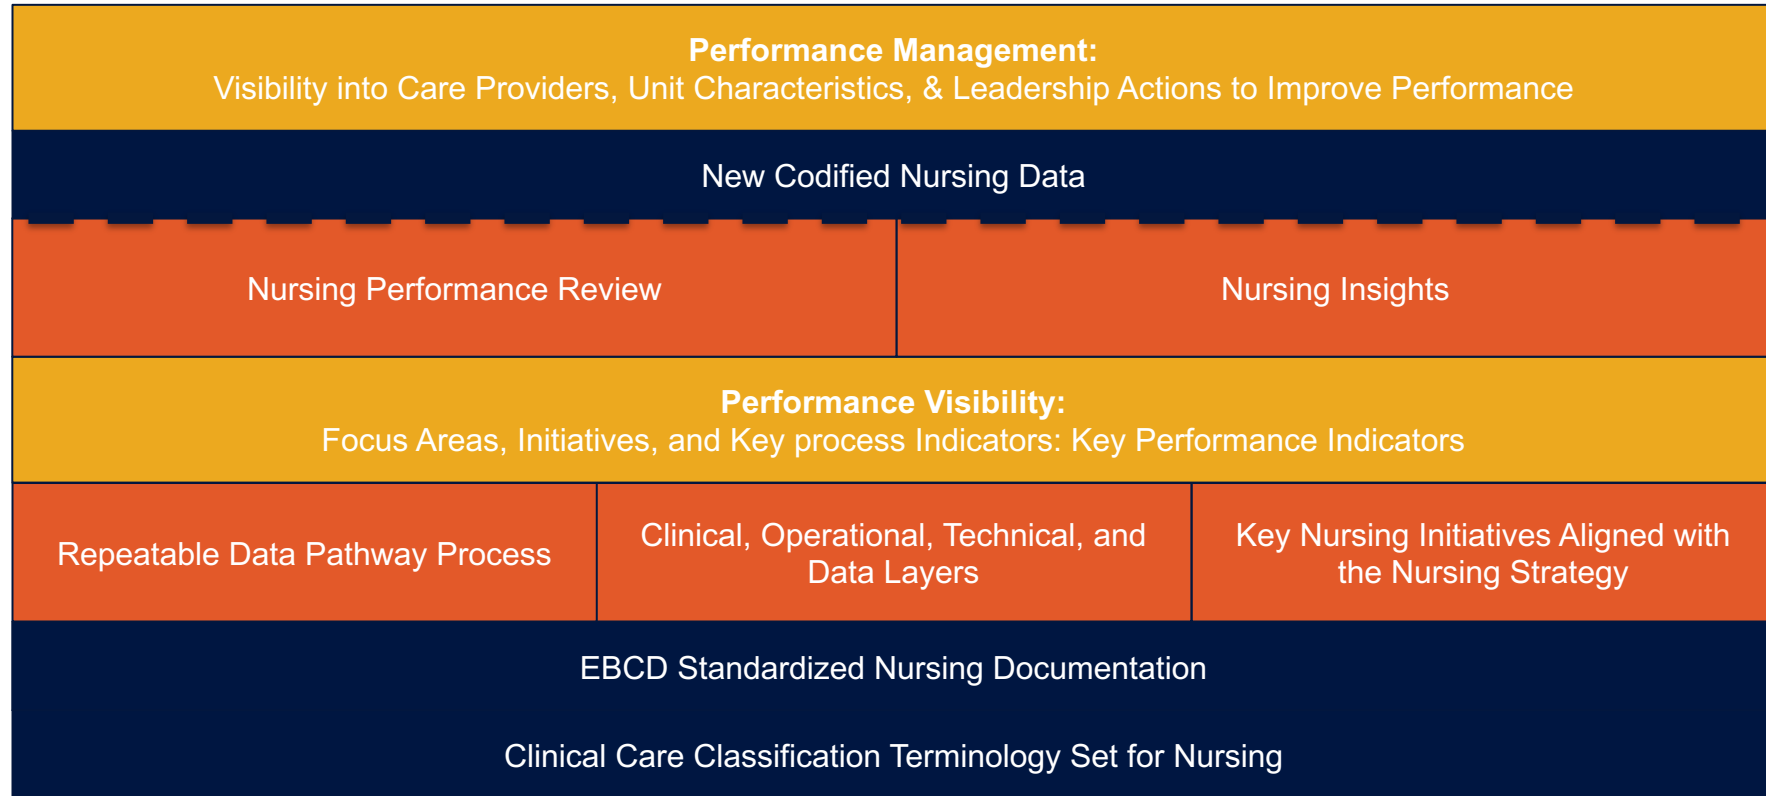

SCOPE:

Inpatient Surgical Services Emergency Services
Pediatrics Behavioral Health Respiratory Therapy

FOUNDATION FOR HCA NURSING PRACTICE:

Pain Assessment Wound Assessment & Staging Safety & Risk Assessment
Tube/Line/Catheter Management Plan of Care
Hygiene Care Ventilator Management

Performance: Visibility and Management

1.4 Billion “Action Type” data points for: Assess

Concluding Points:

- **Myth busted:** Need more data in order to satisfy the “X’s”: No tension between the data need and the reporting need, more data does not mean better care
- **Illuminate *actionable* data** within latency for process/practice-level improvement [“Dan says: kill your outcomes-reporting dashboards, in real time”]
- **Use the data** to improve provider’s knowledgeable practice, learning-loop enhancements to workflows, and focus improvement interventions specific to the process/practice.
- Future state: Rethink EMRs as repository receiving inputs from a patient-centric overlay, with provider engagement that is useful for and useable to rendering care: **embed Gen-X gadgets, use apps** when appropriate, and tell the current state patient story in context between the patient/family and provider
